I am an experienced Full-Stack Developer with deep expertise in designing and building robust, scalable software solutions. I specialize in front-end development using Angular, delivering clean, responsive interfaces with structured, maintainable code that ensures performance and adaptability across platforms.

On the back-end, I focus heavily on developing scalable and secure RESTful APIs using ASP.NET and .NET Core. I write clean, consistent, and maintainable back-end code with emphasis on performance, modular structure, and long-term flexibility in enterprise-grade systems.

My strong problem-solving mindset enables me to efficiently debug, refactor, and implement resilient solutions under tight deadlines.

With a strong ability to follow technical direction and deliver assigned tasks effectively, I contribute to smooth workflows and consistent, high-quality results. I am passionate about delivering reliable, scalable software that supports real-world business goals and user needs.
